

WHY CHOOSE SHIPLAP?

Shiplap sheds are an ideal choice if you intend on spending time in your shed, as a workshop for example, or are planning to store items that could not risk coming into contact with any moisture.

Shiplap cladding consists of multiple boards of timber which **creates a flush panel**. It also features a recess at the top of the individual boards which **helps water run-off**, offering protection against the elements. Not only is shiplap cladding **watertight**, but it also has the added benefit of being **airtight**, meaning belongings are much less at the risk of draughts and dampness.

Another added benefit is its aesthetically pleasing **smooth exterior**, coupled with **smooth interior panels**, creating a high standard of finish both on the inside and outside of the building. This gives a more premium feel to your garden.
